

SharePoint Migration Bundle

SharePoint is a great Document Management System
Setting up can be a challenge.
Our Migration Tools Bundle is perfect to get you on track

Document Migrator

Point at a local folder and Migrator will copy your documents up to Sharepoint.

Features include:

- Replicates folder structures
- Copies all your documents into SharePoint
- You can exclude files (desktop.ini, thumbs.db etc)
- Exclude files by wildcard using Regex
- Deals with special characters not allowed in SharePoint.

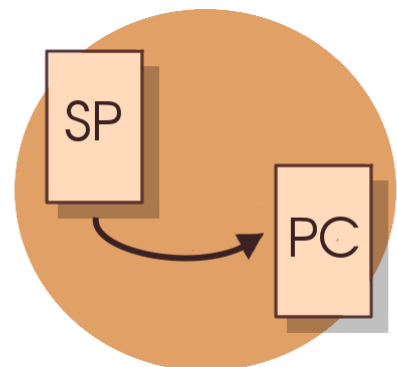

- Handles read only files – these normally cause issues with migration
- Can be run as an incremental copy so you can run it multiple times using date flags for copying
- Is run from a commandline so you can schedule as a task to run daily, weekly etc.
- Can be run in unattended mode.
- Is possible to run in safety mode to ensure that you do not copy over existing files.
- Provides a list a erroneous files for later resolution and re-run.

Document Downloader/Backup

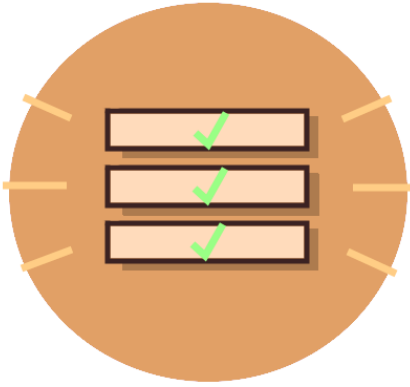

Point at a SharePoint folder/Library and Migrator will copy your documents up to Sharepoint.

Features include:

- Replicates folder structures
- Copies all your documents from SharePoint to a local computer or network share
- Excellent for data backup
- Excellent for migrating from SharePoint if you are moving to another tool.

SharePoint Migration Bundle

Metadata tagger

After document migration, use the Metadata tagger to update the metadata in your Document Library.

Features include:

- Uses a query language based on your folders to identify metadata to update.
Example might include "Shared Documents/Clients/%/Financial/* - Document Category=Financial"
- Copies all your documents into SharePoint
- Wildcard style searches.
- Query file is a separate file which you can tweak and modify as you go.

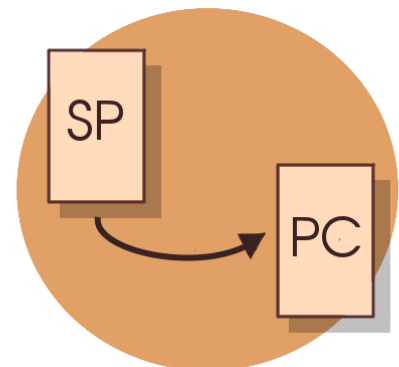

- Can be run as an incremental copy so you can run it multiple times using date flags for copying
- Is run from a commandline so you can schedule as a task to run daily, weekly etc.
- Can be run in unattended mode.
- Designed to be run during migration to compliment the Document Migrator

Folder and listing download

A companion tool for the Metadata tagger.

Features include:

- Point at a SharePoint folder and download a list of sub folders, the list can then be used to build queries for the Metadata tagger
- You can specify how many folders to dig down.
- You can specify if you want file names as well.

SharePoint Migration bundle

The Bundle option includes all 4 tools:

- Document Migrator
- Document Downloader
- Metadata Tagger
- Folder Lister
